September 25, 2020

Assumptions

Ideal Gala Attendee

Our Strategy...

...is to focus on neighborhoods that meet the following criteria:

- high density of women dwelling or working
- high income population
- locations that are tech hubs
- universities with STEM based programs

Data Methodology

Collection

MTA Turnstile Data:

- Two months prior to event date
- 2019 for better representation of NYC volume

NYU Furman Center - American Community Survey:

- State of NYC's Housing & Neighborhoods for 2006, 2010 and 2018

MTA Analysis

1. Filtered turnstile counts for errors:
 - a. Counts > 1 Million between days
 - b. Summed entries and exit counts
2. Grouped and summed turnstiles in each station:
 - a. Avoiding duplicate station naming by grouping each station with its subway line.

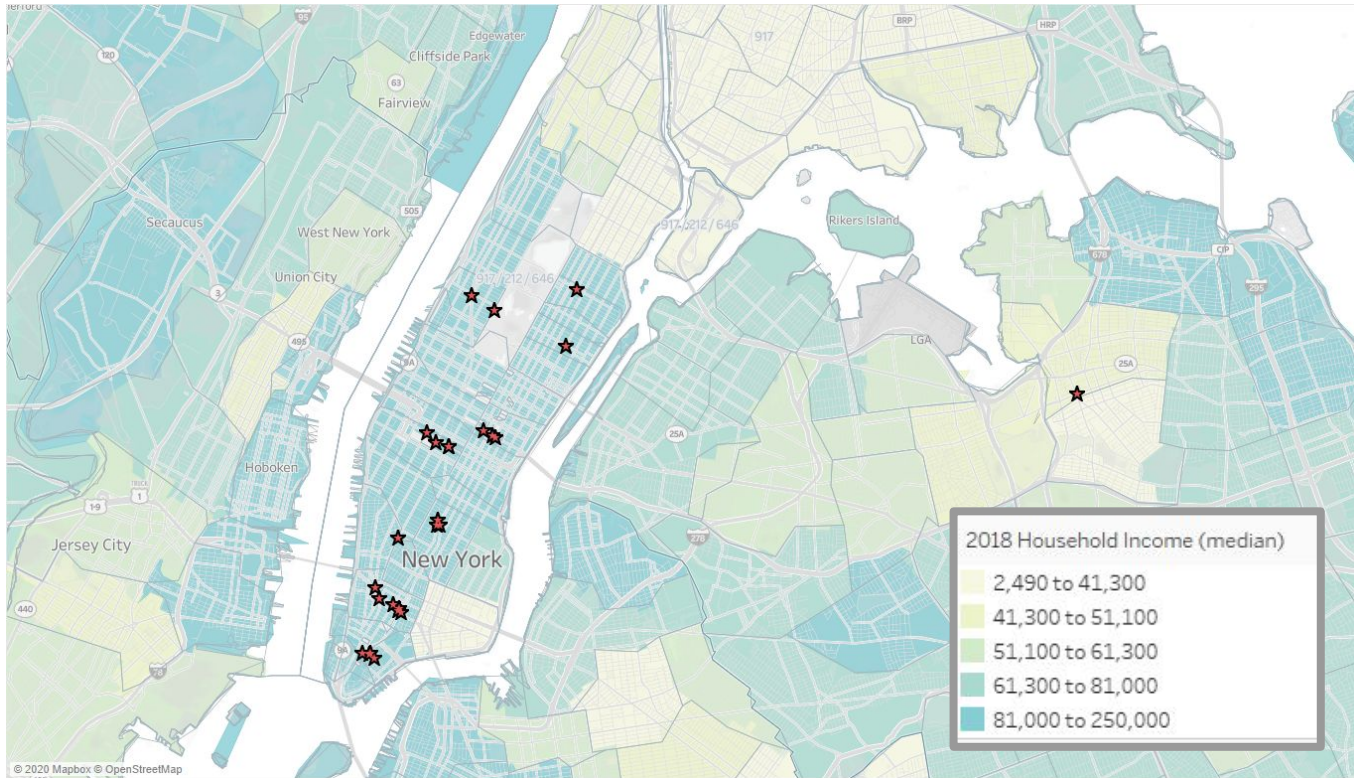

MTA Result

3. Daily station average across 2 month period.
4. Daily station average by day of the week.

Further Considerations

When should canvassing be done?

Where should canvassing be done?

How many people should canvass?

THANK YOU
